Attached.

**No Discharge** at C Pond. Standing water around weir and Southeastern edge of Pond C and into center of C Pond beginning to recede. Water level inside bottom of weir is below pipe.

Very little to no seeping and dripping inside C Pond discharge weir about.

Standing water behind sand-bags at 'A' with standing water at the toe of the slope and flow under bags into rip-rap. The southern edge of the 'A' pond interior, from the SE corner to the sandbags, continues to hold water. The NE end of A Pond is holding water in pathway created from matting/equipment activity, noticeable depression in this section from activity related to drilling.

No standing water behind sand-bags at 'B' pond.

Precipitation on 05/11 was 0.19".

Let me know if you have any questions.
